

Geometry vocabulary

Aimee Green

The "undefined" Terms

* Point - used to Mark/
show where something
is or another
geometric shape

* Line - extends indefinitely
in Both Directions

Definitions

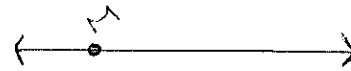

* Collinear Points - points that
lie on the same
line

* Coplanar points - Points that
lie in the same
plane

* Coplanar lines - lines that
are on the same
plane

* Noncollinear points - Points
that do NOT lie on
the same line

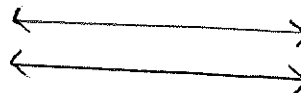

* Noncoplanar points - Points
that do NOT
lie on the same
plane

* Noncoplanar lines - lines that
do not lie on
the same plane

* Line segment - clearly defined
section of a line
(2 endpoints)

* Parallel lines - lines that never
intersect

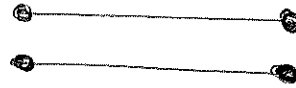

* Parallel Planes - Planes that never intersect

* Congruent - Same size and shape

* Congruent segment -
Same exact line segment

* Midpoint -
exactly in the middle

* Ray - line that only extends in one direction

* Angle - 2 rays extending in different directions from the same point
